PERSONAL PROJECTS

INNOVATION PROJECT-CHATBOT

- In this Python project with source code, we are going to build a chatbot using deep learning techniques. The chatbot will be trained on the dataset which contains categories (intents), pattern and responses.

Sign Language Detection Using ML

- We developed a LSTM - based sign recognition model that can identify sign language gesture using hand movement data .

Zomato clone-html,css

- Creating a Zomato clone involves building a web application that allows users to browse restaurants, view menus, make reservations, and possibly even order food online. Below is a basic description of how you can approach building a simplified version of Zomato using HTML, CSS.

Resume Building (python and Django)

- The aim of Resume Builder project is to **provide a means by which candidates can present themselves effectively through their resumes** . The candidate is provided with an online form with details to be filled, such as name, personal details, educational qualifications, skills, etc.
